

Nontechnical Soil Descriptions

Nontechnical soil descriptions describe soil properties or management considerations specific to a soil map unit or group of map units, shown in the "Nontechnical Soil Descriptions" report. These descriptions are written in terminology that Non-technical users of soil survey information can understand. Nontechnical soil descriptions are a useful tool for creating reports. These high quality, easy to read reports can be reproduced by conservation planners and other NRCS employees for distribution to land users. Soil map unit descriptions and National Soil Information System records are the basis for these descriptions.
